SUMMARY

Frontend Engineer with 5+ years of experience building high-performance web applications using HTML, CSS, JavaScript, React, TypeScript, and Next.js. Experienced in building scalable frontend systems that integrate with distributed backends and large-scale distributed architectures. Passionate about clean architecture, performance optimization, and collaborating with cross-functional teams to deliver impactful products.

EXPERIENCE

Software Development Engineer 2

Livspace | January 2025 – March 2026 | Bengaluru

- Owned Ops systems spanning multiple MFEs — **IMS, OMS, VMS, and WMS** — handling **core business management**, accountable for ₹200+ Cr in revenue (**FY 2025**).
- Built an end-to-end **Request–Response workflow** across **Store Central** and **Canvas** for new site project initiation, leading cross-functional collaboration across a **7-member team**; eliminated manual dependencies and accelerated execution — directly impacting ₹11.6 Cr in business value.
- **Engineered** scalable frontend systems using nested **Micro Frontends (MFEs)** via **Webpack Module Federation**, aligned with microservices boundaries — enabling module isolation and independent deployments across teams.
- Improved frontend delivery velocity by **10x** by integrating **agentic AI workflows** and autonomous **agents** into internal tooling, reducing multi-day UI implementations to same-day execution while maintaining review standards.
- Conducted **20+ technical interviews** for **SDE 1/2 roles**, evaluating frontend architecture, problem-solving ability, and code quality as part of the **hiring panel**.
- Built the complete **Account module** (Profile, Addresses, Wallet, Order History), integrating **20+ backend APIs** with **authentication guards**, token refresh handling, and resilient API orchestration.

Software Engineer

Aionos (Indigo) | July 2024 – January 2025 | Hyderabad

- Architected reusable, type-safe **UI component libraries** using React, TypeScript, and Tailwind, reducing feature development time by **50%**; collaborated across teams to ensure design consistency.
- Designed and integrated LLM-driven automation workflows leveraging **OpenAI APIs** and **Node.js** — optimized for performant, scalable execution — improving operational efficiency by **40%**.
- Led end-to-end UI–API integration using **React hooks, Axios/Fetch**, and optimized REST contracts, improving application responsiveness by **30%+** through memoization, lazy loading, and efficient state management.

Software Developer

Skillgigs | March 2021 – November 2023 | Delhi

- Built and launched scalable marketplace features using **React** and REST APIs, increasing user adoption by **79%**.
- Implemented secure **OAuth 2.0** authentication flow (**JWT-based session management**), improving login success rate by **91%** and enhancing security compliance.
- Reduced API latency by **900ms** through Node.js performance optimizations including query optimization, caching, and async processing — ensuring **high-throughput, low-latency** service delivery.
- Developed real-time chat functionality using **WebSockets (Socket.io)**, increasing user engagement and session duration.
- Designed and implemented **CI/CD pipelines (AWS Amplify)**, reducing deployment time by **47%** and improving release reliability.

Software Developer

Wipro | August 2019 – December 2019 | Delhi

- Collaborated with engineering teams to debug and resolve complex technical issues, ensuring platform stability.

EDUCATION

Specialized in Software Development & Problem Solving

Scalar Academy • Bengaluru • 2023–2024

Bachelor’s in Mechanical Engineering

Rajiv Gandhi Proudyogiki Vishwavidyalaya • Bhopal • 2015–2019

SKILLS

Frontend Architecture: Micro Frontends (Module Federation), Component Contracts, Atomic Design, Token-based Theming, Design Systems

Frontend Stack: HTML, CSS, JavaScript, React, TypeScript, Next.js, Redux Toolkit, Vue (Composition API), WebSockets

Systems Design: Distributed frontend architecture, API-driven systems design, High-throughput & low-latency integrations

Performance & Optimization: Code Splitting, Lazy Loading, Memoization, Rendering Optimization, Bundle Optimization, Webpack

Testing & Quality: Jest, React Testing Library, Integration Testing, CI/CD Pipelines

Backend & Platforms: Node.js APIs, OAuth, AWS (S3, Lambda, Amplify), Serverless

AI-Augmented Development: LLM-assisted scaffolding (Claude, Copilot, Cursor), Prompt engineering, Developer automation

Collaboration: Cross-functional teamwork, Async documentation, Agile delivery, Stakeholder alignment
